# See Voicemail Differently with STLCOM.Com's
Voicemail Transcription Service!

EASY TO IMPLEMENT

It's time to take the pain out of implementing unified messaging. Voicemail transcription services are clientless and can install on a virtual server on premise or in the cloud. Entire enterprise deployments are set up quickly and efficiently with remote installation by our world class operations team.

EASY TO USE

If you know how to use email, you are already trained! Voicemail transcription doesn't requre the user to install any local software. Users immediately start receiving voice messages they can act on.

UNIQUE FEATURES

- Multi-Channel message delivery to email, IM, SMS and visual voicemail.

- giSTT voicemail to text, while not perfect, enables users to get the "gist" of their voice message without having to listen.

- Streaming Audio enables enterprises that don't allow sound file in email to get all the benefits of unified messaging without having to worry about archiving sound files in email.

- Message control links in email enable users to delete messages from the voicemail server or mark them read to turn off message waiting lights on office phones.
