Technology made easy.

STLCOM.COM SIP SOLUTION
STOP WASTING YOUR MONEY ON OLD EXPENSIVE POTS/T1/PRI!

SIP

SIP (Session Initiation Protocol) is a technology used to provide voice, video and messaging communication sessions via the internet. This technology allows calls to exist without a landline, providing important benefits to end users.

POTS T1/PRI

Without the upkeep of a physical land line, SIP trunking lowers costs and combining internet, long distance and local calls into one network reduces overhead expenses and optimizes efficiency.

Other features:

- Porting of phone numbers

- Easily scalable due to the virtual connection

- Compatible and works with most communicaton systems

- SIP Trunking can reroute services if Internet connection fails in a disaster

Stop stressing about landline-based issues and stop paying for expensive PRI and analog services - SIP trunking simplifies your telephone calls, increases workplace efficiency and is scalable to fit your business.
