IS SD WAN RIGHT FOR YOUR HOSPITAL?

REGARDLESS OF YOUR DEPARTMENT, SD-WAN CAN IMPROVE YOUR CONNECTIVITY AND CONTROL

- > Do you have cloud-based healthcare applications? Do you provide virtual care or video usage for patients?
- > What is more expensive to your organization – the nominal SDWAN cost or suffering from out-ages or slowdowns to your critical applications? (According to Gartner, your slowdown could be costing you as much as \$5,600/minute!)
- > Would you be interested in a solution that would replace or augment your current expensive MPLS networks?
- > Are you tired of complaints from staff and patients regarding internet speed and other problems?
- > Would you like increased visibility into the WAN and applications being used?
- > Would you like the ability to throttle non-healthcare applications in use?
