

SECURITY OPERATIONS CENTER (SOC)

PROTECTING YOUR DIGITAL FORTRESS

New!

Keeping pace with the daily grind of monitoring your environments for attacks-in-motion can burnout the best of staff. As the alerts build and response is stretched thin, the protection you rely upon becomes vulnerable to failure. Our SOC services are here to help! Working with your team, our certified security analysts, cutting-edge threat intelligence, and latest solutions will manage all your security monitoring, 24/7. You'll be more secure and your business more free to scale and grow.

HOW WE HELP KEEP YOUR BUSINESS SECURE

24/7/365 threat monitoring and response

Cybercriminals don't work normal hours. Attacks can hit at any time, and SOC (Security Operations Center) services are ready when the time comes. We're continuously monitoring, detecting, and remediating threats to keep your business secure.

Fully staffed team of security experts

The SOC services team includes certified security techs, security analysts, incident response analysts, security researchers, and threat hunters. Do you already have a few security techs on staff? Our team will take care of alerting and triaging and consult your team when there are issues they need to handle.

Cutting-edge security intelligence

The threat landscape is always changing. Our Cyber Research Unit is dedicated to identifying the latest threats, ensuring our SOC team is on high alert to catch what's lurking in the shadows.

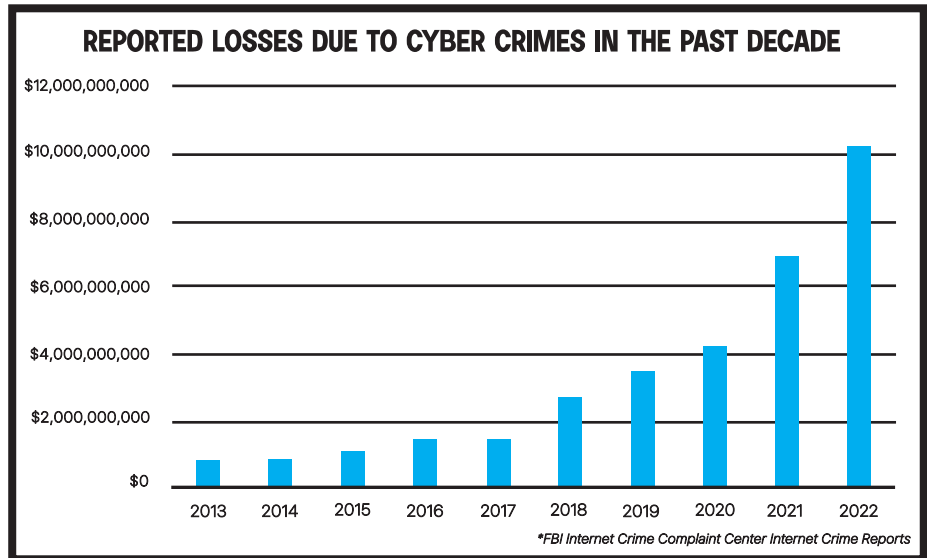

Scale your business security

It's hard and expensive to build out a security team, let alone a fully staffed, 24/7 in-house SOC. We'll jump in when it comes to keeping your business secure.

SECURITY OPERATIONS CENTER (SOC)

THE BENEFITS OF PARTNERING WITH A SOC PROVIDER

The uptick in cyber attacks is pushing 42% of businesses to invest more in their cyber security strategy. Is your business prepared? Partnering with a SOC provider can help keep your business protected 24/7.

WHAT TO EXPECT WHEN WORKING WITH STL'S SOC SERVICES

What truly sets our SOC services apart is how we integrate into your business. When we say we're an extension of your team, we mean it. We work side-by-side with you and your team to keep you protected.

When we find an issue, we start working on it right away because there's no "I'll get to it tomorrow" in cyber security. We'll verify the threat, take the machine offline to contain it, and, if needed, roll it back to a secure state. When a high-priority issue pops up, we'll reach out to you to determine the right plan of action together.

Since cybersecurity is a team effort, we'll even jump on the phone to help discuss threats or other cybersecurity issues with you.

As your partner in cyber security, SOC services work behind the scenes to make sure your cyber safety never skips a beat. We'll keep you informed of everything we see internally. We'll do all the work; you get all the glory.
