

VULNERABILITY MANAGEMENT

ASSESS YOUR CURRENT CYBER RISK AND SCAN YOUR ENVIRONMENT ONGOING FOR NEW THREATS

New!

Protecting your business from cyber threats requires shared understanding of your current state of risk followed by proactive assessment of your environment. STL's Risk Assessment helps you to quickly identify these risks by level of severity, thus informing discussion for prioritization of remediation measures and improvements to your defense-in-depth.

PROACTIVELY MONITOR FOR RISK

Custom reports

Receive cyber security reports that will resonate with your team in a clear, concise way. Our Risk Assessment reporting exposes and explains threats associated with the dark web, risks to endpoint and user accounts, and provides peer-to-peer comparison security strategies.

Quick threat identification

Get daily alerts of all suspicious network events via endpoint and firewall monitoring to keep you in the know and secure.

In-depth security assessments

Good security goes beyond a few desktop virus-scanning apps and a firewall, and risks hide where your employees least suspect them. Scan networks against known and unknown vulnerabilities to see a holistic picture of your security posture.

Risk Assessment

Risk Assessment is an ideal solution for quickly providing a snapshot of your current cyber risk exposure. Risk Assessments pave the way for building a roadmap for prioritized remediation measures and focused discussion on deployment of additional measures.

Vulnerability Management

Once your current state of risk has been identified and addressed, it's important to diligently maintain on-going cyber hygiene. Vulnerability Management allows you to move beyond a "snapshot-in-time" by automating routine scanning of future threats and vulnerabilities.
